Dear Hiring Manager,

For a little over four years I was the Senior Salesforce Administrator and admin team lead at iFIT, the company behind NordicTrack, ProForm and FreeMotion. Our org supported 500+ users across the U.S., Canada, Europe, Australia, New Zealand and Mexico, and my work grew well past day-to-day administration. I led a two-person admin team, mentored a developer on declarative best practices, and built solutions at the architect level: Apex REST endpoints and callout classes, Lightning Web Components with Custom Property Editors, Flow work directly in Flow XML, and an SAP DQM address-validation integration I architected.

The results I'm proudest of are the ones that made the org easier to run. I led a three-month data cleanup that removed more than 572,000 records (11%) across three objects while keeping every related record intact. I found and fixed automation recursion and broken processes for a 20%+ efficiency gain, and I concluded the migration of our Canada and Australia business units into Salesforce. I also assisted with our Agentforce implementation alongside the consultancy a360, turning their deliverables into production-ready Apex and Flow.

That pattern started early. At Monumetric I built a custom Jira, Salesforce and Slack integration as part of my technical interview, with no third-party tools, and it earned me the role. At TaskEasy I designed and implemented Service Cloud from the ground up for 300+ users and automated the Finance department's work for a 35-45% gain in productivity.

I also bring a disciplined way of working with AI. I run custom AI models in parallel on multi-stage projects under a standards framework I wrote myself, with grounding and guardrails that keep the work accurate, and I built a Python and Node.js MCP server that gives AI tools access to local files. It lets me deliver faster without cutting corners on security or governor limits. I'm using the same approach at twiddlebox.io, a software company my wife Kristina and I co-founded to help people build production Salesforce work without a development background.

I'm looking for a senior Salesforce administrator or architect role where I can bring that mix of administration, architecture and steady team leadership. Sample code showing the Apex, Lightning Web Component, integration and AI patterns I use is on GitHub at github.com/jrhogan77. I'd welcome the chance to talk about how I could help your team.

Thank you for your time and consideration,

Jason Hogan
Senior Salesforce Administrator and Solutions Architect
