CERTIFICATIONS

- Salesforce Certified Administrator
- Salesforce Certified Advanced Administrator
- Salesforce Certified Platform App Builder

APEX — PRODUCTION CLASSES

- **AccountSequenceRestService**
  RESTful inbound endpoint — account sequence provisioning
- **AccountSequenceRestServiceTest**
  Full coverage test suite for REST layer
- **AccountSequenceService**
  Core service layer — sequence logic & DML orchestration
- **AccountSequenceServiceTest**
  Unit tests — service layer coverage
- **GetAccountSequenceAction**
  @InvocableMethod — Flow-callable sequence retrieval
- **SmartAddressBlockController**
  Apex controller — SAP DQM callout & address validation pipeline
- **SmartAddressBlockControllerTest**
  Test class — DQM callout mock & assertion coverage
- **PhoneInputController**
  Apex controller — phone normalization & format enforcement
- **PhoneInputControllerTest**
  Full coverage — phone validation logic
- **SAP_AddressData**
  Data Transfer Object (DTO) — SAP address payload container
- **SAP_AddressValidation**
  Callout class — SAP DQM REST integration & response parsing
- **SAP_AddressValidationTest**
  Mock callout test suite — SAP DQM response coverage

LWC — PRODUCTION COMPONENTS

- **smartAddressBlock**
  Multi-target address entry with live SAP DQM validation
- **smartAddressBlockCPE**
  Custom Property Editor — CMDT-driven Flow Screen config
- **smartFlowFooter**
  Reusable Flow navigation footer — dynamic action control
- **smartFlowFooterCPE**
  Custom Property Editor — footer behavior configuration
- **smartNavButton**
  Configurable Flow navigation button — conditional rendering
- **customPhoneInput**
  Phone entry LWC — format enforcement & Apex callout
- **customHeader**

Jason Hogan

SALESFORCE SOLUTIONS ARCHITECT · FULL-STACK DEVELOPER · AI ENGINEER

PROFESSIONAL SUMMARY

Full-stack Salesforce architect and AI engineer with **8.5 years** of production delivery across Sales Cloud, Service Cloud, CPQ, Commerce Cloud, Marketing Cloud, Analytics Cloud, and Experience Cloud. Designs and deploys enterprise-grade Apex, LWC, and integration solutions — and independently pioneered an AI-accelerated engineering methodology that drives architectural velocity without compromising platform security, governor limit compliance, or output quality. Architect of **Twiddle Box Development** — a proprietary platform applying this methodology to make production Salesforce development accessible at scale. Routinely runs **multiple AI models in parallel**, governing each with custom grounding frameworks, context-drift guardrails, and defined role boundaries. Delivers at architect altitude — callout classes, RESTful endpoints, DTOs, Flow XML at the metadata layer, and declarative orchestration — without a formal title to match.

PROFESSIONAL EXPERIENCE

iFIT (NordicTrack / ProForm / FreeMotion)

January 2022 – May 2026

Senior Salesforce Administrator / Full-Stack Solutions Architect & AI Engineer — Development & Admin Team Lead

Global fitness brand — 1,000+ users across the U.S., Canada, Europe, Australia, New Zealand, Mexico, and U.S. Territories. Independently owned the full Salesforce delivery lifecycle across 7 clouds — declarative, programmatic, and AI-engineered — evolving the function from Senior Administrator into a full-stack architecture and AI engineering role with no formal handoff and no outside direction.

AI ENGINEERING & PROMPT ARCHITECTURE

- Designed and deployed production AI workflows running **multiple custom AI models in parallel** across complex, multi-stage projects — each model governed by a shared sprint contract tracking independent work phases.
- Authored a proprietary **AI Engineering Standards framework** — custom grounding techniques, context-drift guardrail placement, and prompt orchestration patterns — developed entirely without formal training, maintained as personal IP, and actively in use.
- Built deep expertise in context window management and model drift detection — identifying context loss in real time and correcting course without session restarts.
- Architected a multi-stage data migration solution using **privately developed AI models** and Antigravity IDE as the primary IDE — migrating both record data and metadata. Proprietary, personally developed intellectual property.
- Implemented a **Python / Node.js MCP server** for local file system delivery driven by AI models — extending AI tooling directly into the development environment without a CLI dependency.

EINSTEIN AGENTFORCE

- Contributed as internal Salesforce lead to a full Einstein AgentForce implementation delivered in partnership with consultancy a360 — owning knowledge article curation, Next Best Action configuration, layout design, and production deployments throughout the engagement.
- Served as the internal subject matter expert bridging declarative architecture and the consultancy's development directives — ensuring AgentForce extended into custom Apex and Flow in alignment with organizational requirements.

FULL-STACK SALESFORCE DEVELOPMENT

- Orchestrated and personally architected a full **SAP DQM callout solution** — DTO container, invocable Apex classes, and multiple subflows that standardize, clean, and validate inbound address data. A locally triggered Screen Flow then presents validated and unvalidated fields for correction or override, re-validates against DQM logic, and packages the final address downstream into the account-creation record variable.
- Designed and built production-grade **LWC components with custom Property Editors (CPE)** spanning .js, .html, .css, and .xml — including the multi-target Smart Address Block with CMDT-driven configuration, Flow Screen and Record Page targeting, and multi-org deployment support.
- Architected **callout classes, RESTful endpoints, back-end data operations, and DTOs** enabling declarative Flows to pull and process data from custom Apex REST endpoints.

COMMERCE CLOUD

- Built a custom **order-confirmation email process** for an end-user parts-ordering portal using standard HTML and CSS, fed through a custom Flow (loop, decision, update elements) generating a dynamic email populated line by line based exactly on what was ordered.
- Configured economical pricing strategy across pricing rules, rule sets, discounts, and promotions for streamlined pricing distribution.

ANALYTICS CLOUD & SECURITY DATA GOVERNANCE

- Built event-monitoring data recipes and high-volume processing tasks that continuously analyze security data to detect and prevent unauthorized environment access.
- Designed multiple dashboards surfacing every data ingestion risk point — visibility into potential downtime or resource waste before it became operational impact.
- Led a 3-month data-cleanup initiative resulting in a net reduction of **572,527+ records (11%)** across 3 objects with full relational integrity preserved.

CPQ

- Configured and maintained Salesforce CPQ for complex product-catalog and pricing workflows.

Reusable branded header — dynamic title & icon support

- **brandedHeader**
  Full-bleed brand header — Flow Screen & Record Page
- **simpleFlowHeader**
  Lightweight header — single-line Flow Screen branding
- **screenFlowBanner**
  Contextual banner — status, alerts & guidance messaging
- **flowActionCard**
  Card-style action selector — conditional logic & routing
- **flowValidationOverride**
  Client-side validation override — pre-navigation enforcement
- **quoteNavigationHandler**
  CPQ quote navigation controller — stage & step routing
- **accountCreationTab**
  Account creation tab host — multi-step Flow orchestration
- **universalWidgetSupreme**
  Universal display widget — multi-context record rendering

TOOLS & PLATFORMS

Antigravity IDE · PowerShell · Git / GitHub · SFDMU · Salesforce DX · Node.js · Python · Apex · DTOs · CMDT · SOQL / SOSL · HTML · CSS · JS · XML · Lightning Web Components · Flow Builder · Sales Cloud · Service Cloud · CPQ · Commerce Cloud · Marketing Cloud · Analytics Cloud · Experience Cloud · Google Apps Script · MCP Server · Custom AI Models · Einstein AgentForce · RESTful Endpoints · Prompt Engineering · AI Workflow Architecture · Gearset · Postman · SAP Integration · SAP DQM · Scrum / Agile · Data Migration · Data Governance · Security & Compliance · Solutions Architecture · Full-Stack Development · AI Engineering

- Executed a major production-to-sandbox migration using SFDMU across **33 interdependent objects**, including custom PowerShell automation and full dependency and referential-integrity management.

FLOW ENGINEERING VIA XML

- Manipulates Flow metadata directly at the XML layer in Antigravity IDE — searching, identifying, and updating large volumes of Flow records through an injectable XML process.
- Architected 2 complex Flows end-to-end by authoring detailed generative instructions for custom AI models to produce valid Flow XML, then injecting elements, decisions, and resources — with proper naming conventions and descriptions — directly into the Flow file.

AUTOMATION, TOOLING & DEPLOYMENT

- Built a **deployment notification tool** enabling any admin to generate the exact specifications of a pending production deployment with a single button press.
- Wrote custom **Google Apps Scripts** for Google Sheets enabling real-time UAT testing progress tracking without opening each individual test script.
- Wrote a custom **Google Apps Script** to purge bad and outdated data from the shared Google Drive structure while creating a redundancy backup.
- Wrote a custom **Google Apps Script** that transforms plain-text documentation containing visible markdown syntax into production-ready formatted Google Docs — automatically applying headings, font sizing, color theming, bold, tables with cell shading, and blockquote styling in a single execution.

REGIONAL EXPANSION & TEAM LEADERSHIP

- Directed the declarative migration of Canada and Australia business divisions into Salesforce — support processes, automation, case management, chat, and Omni-Channel routing.
- Forensically identified automation recursion, broken processes, and systemic inefficiencies; delegated resolution ownership to the admin team as a mentoring vehicle, improving efficiency by **20%+** while raising team confidence.
- Authored the full documentation stack — technical design documents, UAT user manuals, testing scripts, admin run books, and user guides.

INDEPENDENT INITIATIVE — TWIDDLE BOX DEVELOPMENT

Co-founded by Jason and Tina Hogan — a husband-and-wife venture built on complementary strengths. Jason serves as Lead Architect and primary developer, directing a technically demanding full-stack build spanning Apex, LWC, Flow XML, and AI orchestration infrastructure. The platform is well underway: production methodology deployed, core architecture in place, and IP registration actively in progress.

TaskEasy / WorkWave

March 2020 – January 2022

Salesforce Administrator / Jr. Developer & Full-Stack Solutions Architect

Supported 300+ Service Cloud users for a nationwide service provider — mentored by an 18x-certified Salesforce Systems Architect. Delivered development-grade solutions while holding an Administrator title.

- Designed and implemented Service Cloud from the ground up, establishing best-practice foundations and data-integrity standards.
- Architected a fully custom **Jira-style Sprint Board object** inside Salesforce — a permission-set-controlled ticketing system allowing authorized users to submit Salesforce requests, routed through a custom sprint board with full team visibility. Standalone architect, no external support.
- Developed **Visualforce** pages and components — custom UI solutions beyond native Lightning capability.
- Built and maintained **AWS integrations** — custom data pipeline connections between Salesforce and Amazon Web Services infrastructure.
- Introduced in-house vendor-network support solutions, improving vendor turnover by **15%**.
- Solely architected complex Finance-department automations, increasing productivity by **35–45%**.

Monumetric

November 2019 – March 2020

Salesforce Administrator / Junior Developer (COO-acknowledged functional title)

Primary Salesforce contact for 50+ Service Cloud users — and the architect of an integration that set the trajectory for everything that followed.

- Engineered a **tri-directional Jira / Salesforce / Slack integration** from scratch during the technical interview process — zero prior formal Salesforce experience, zero third-party tools. Required stripping back and reverse-engineering existing automations, then unifying fragmented logic into a single cohesive process. Secured the hire. COO formally acknowledged the developer title.
- Implemented a new Sales onboarding process, increasing Publisher/Customer satisfaction by **32%** and reducing revenue attrition by **14% ($238K)**.
- Built reports, dashboards, and KPI-monitoring processes to alert management to underperformance in real time.

PROFESSIONAL ATTRIBUTES

Known for handling conflict resolution with ease — leading with an intelligent, empathetic approach that brings out the best in difficult situations. Combines architect-level technical depth with a declarative-first mindset and an unwavering ethical commitment to delivering accurate, fully intact work. Operates with the same standard whether anyone is watching or not.
